1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. § 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the Issue Fee.

2. Pursuant to MPEP 606.01, the title has been changed to read:

-- A PRINTING SYSTEM FOR SELECTIVELY ERASING PRINT DATA SET
IN SPOOL REGION WHEN TOTAL DATA SIZE OF PRINT DATA SETS
EXCEEDS PRESET REFERENCE DATA SIZE --

3. The following is an Examiner's Statement of Reasons for Allowance:

Nezu, patent no. 5,970,228, teaches a method of handling print data should be deleted from internal spool in the print server after retention period has passed or when the time for holding a print job as a temporarily held job has exceeded the maximum retention period. Kimura, patent no. 6,226,097, teaches size information of print data is transmitted in advance to printer server, and determination of whether or not the print data can totally be received is performed by comparing the size of the received print data and the size information when the transmission of the print data ends. In the above manner, no data remains inevitably in a buffer in the printer when the process of one job ends, which enables the next printing. In addition, Kimura teaches the printer comprises: receiving means for receiving print data from an external unit; analysis

means for analyzing the print data received by the receiving means; storage means in which the print data received by the receiving means is stored; erasing means for erasing the print data stored in the storage means; and erasing control means for controlling the erasing means to erase the print data stored in the storage means when a print-interruption request in the received data. The prior art of record teaches the claimed invention substantially as discussed above, but it fails to teach or suggest individually or in combination that a print controller comprising: a print manager associates print data sets stored in a spool region with print management information that includes a predetermined condition; a judgment unit that judges whether or not total data size of the print data sets stored in spool region exceeds a preset reference data size; and a print data eraser that, when the judgment unit judges that the total data size exceeds the reference data size, selects one of the print data set according to the predetermined condition of the print management information associated with each of the print data set and erases the selected print data set from the spool region as set forth in claims 14-21. Claims 14-21 are allowed because of the combination of other limitations and the limitation listed above.

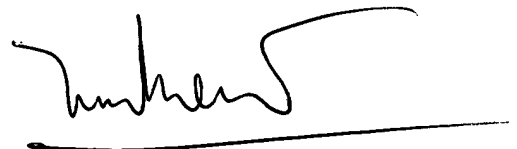

4. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
